Patent No. US20020164743a1
GENERAL INFORMATION:
APPLICANT: HOnjo, Tasuku
APPLICANT: Honjo, Tasuku
TITLE OF INVENTION: NOVEL CYTIDINE DEAMINASE
FILE REFERENCE: 06501-088001
CURRENT APPLICATION NUMBER: US/09/966,880A
CURRENT FILING DATE: 2001-09-28
PRIOR APPLICATION NUMBER: PCT/JP00/01918
PRIOR APPLICATION NUMBER: P1.178999
PRIOR FILING DATE: 1999-12-27
PRIOR FILING DATE: 1999-12-27
PRIOR FILING DATE: 1999-06-24
PRIOR FILING DATE: 1999-06-24
PRIOR FILING DATE: 1999-06-24
PRIOR FILING DATE: 1999-06-24
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  NUMBER OF SEQ ID NOS: 36

                                                                                                                                                                                The present sequence is human activation-induced cytidine deaminase
The Draugh Structurally relates to an RNA editing enzyme APOBEC-1 and
has activity similar to APOBEC-1. AID has antiallergic,
constrained activities, and can be used in agene therapy. AID
dermatological activities, and can be used in gene therapy. AID
conversely activated activities and can be used in gene therapy. AID
treatment of B cell associated imments for identifying drugs for the
treatment of B cell associated immune system disorders, immunodeficiency
disease, IgA nephritis, gamma-globulinaemia, atopic dermatitis, allergic
colitis, asthma, food allergy, drug allergy, allergic rhinitis, Rosen
timentodeficiency disease, ataxia telangiectasia, common variable
in deficiency disease, AIDS (auto immunodeficiency syndrome), elevated
in deficiency disease, AIDS (auto immunodeficiency syndrome), elevated
encoding AID may be used for gene therapy and the antibodies to the AID
protein may be used for diagnosis and treatment of these disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               61 FLRYISDWDLDPGRCYRVTWFTSWSPCYDCARHVADFLRGNPNLSLRIFTARLYFCEDRK 120

The present sequence is mouse activation-induced cytidine deaminase
The Distructurally relates to an RNA editing enzyme APOBEC-1 and
has cytidine activity similar to APOBEC-1. AID has antiallergic,
antianaemic, antiasthmatic, ophthalmological, anti-HIV and
dermatological activities, and can be used in gene therapy. AID
dermatological activities, and can be used in gene therapy. AID
polymoticatides are useful in methods for identifying drugs for the
treatment of B cell associated immune system disorders, immunodeficiency
disease, igh nephritis, gamma-globulinaemia, atopic dermatitis, allergic
colitis, asthma, food allergy, drug allergy, allergic rhintis, Rosen
colitis, asthma, food allergy, drug allergy, allergic rhintis, Rosen
immunodeficiency disease, ataxia telangiectasia, common variable
immunodeficiency disease, AIDS (auto immunodeficiency syndrome), elevated
indunodeficiency disease, AIDS (auto immunodeficiency syndrome), elevated
indunodeficiency disease, AIDS (auto immunodeficiency syndrome), elevated
concoding AID may be used for gene therapy and the antibodies to the AID
protein may be used for diagnosis and treatment of these disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Nucleic acid encoding activation induced cytidine deaminase, useful as

The invention relates to novel human secreted proteins, the nucleic acids encoding them. The protein may exhibit cytokine, cell proliferation or cell differentiation activity or may induce production of other cytokines in certain cell populations and may exhibit immune stimulating or immune suppressing activity, which is useful for the treatment of various immune deficiencies and disorders e.g. severe combined immunodeficiency (SCID), autoimmune disorders e.g. multiple sclerosis, sytemic lupus erythematosis, rheumatoid arthriis, autoimmune pulmonary inflammation. The proteins are also useful in the treatment of diseases and disorders including tissue, skin and organ transplantation and in graft-versus-host diseases (GVHD), in the induction of tumour immunity, myeloid or lymphoid cell deficiencies, wound healing and tissue repair, in the treatment of burns, incisions and ulcers; as well as in treatment of periodontal disease, osteoporosis or osteoarthritis, mediated by

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The PNS and proteins of the invention are predicted to have biological activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and animals, although no supporting data is given. Suggested activities include nutritional activity, cytokine and cell proliferation/differentiation activity, immulating (e.g. as vaccines) or suppressing activity, hemostatic hematopoiesis regulating activity, tissue growth activity, hemostatic activin/inhibin activity, chemoteatic/chemokinetic activity, activity, activity, neceptor/ligand activity, anti-inflammatory activity, activity. The PNS are also stated to be useful for gene therapy. Other activities include inhibiting the growth, infection or inhibition activity. The PNS are also stated to be useful for gene therapy. Other activities include inhibiting the growth, infection or function of bacteria, fungi, viruses and other parasites; effecting bodily characteristics such as, e.g. weight, color, skin, etc., effecting biorhythms or caricadic cycles; enhancing fertility; treatment of depression; treatment of pain; hormonal or endocrine activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               HVELLFLRYISDWDLDPGRCYRVTWFTSWSPCYDCARHVADFLRGNPNLSLRIFTARLYF 115

                                       infarction of cardiac and central nervous system vessel e.g. stroke, sepsis, inflammatory bowel disease, ulcers, bone regeneration The protein, having activin or inhibin-related activities is useful as a contraceptive based on the ability of inhibins to decrease fertility i female mammals and decrease spermatogenesis in male mammals. The proteins and nucleic acids are also useful as food supplements. The present sequence represents a secreted protein of the invention.

The invention relates to isolated polynuclectides (ABA90876-ABA90968 and ABA90980) and encoded proteins (ABB55698-ABB5800), especially computated by the contained in polynuclectides SEQ ID NO 1 (ABA90876) and SEQ ID NO 19 (ABB55707) contained in proteins SEQ ID NO 2 (ABB55698) and SEQ ID NO 20 (ABB55707) contained in clones bd306-7 and yb8-1 respectively and the clones bd306-7 and yb8-1 care deposited with the American Type Culture Collection (ATCC) with accession number 98599. The polynuclectides and encoded polypeptides have cytostatic, anti-inflammatory, immunomodulator, vulnerary, cytostatic, anti-inflammatory activity and acting as cytokine modulators, and anti-inflammatory activity and acting as cytokine modulators, categories regulators, tissue growth modulators and/or cadherin therapies, particularly for preventing, treating or ameliorating any of the following diseases: immune deficiency and disorders; e.g. bacterial corting diseases: immune deficiency and disorders; e.g. bacterial corting diseases: incommune disorders, cancer, systemic lupus cythematosus or graft-versus-host disease; myeloid or lymphoid cell cythematosus or graft-versus-host disease; myeloid or lymphoid cell costeoarthritis; central and peripheral nervous system diseases and neuropathies, e.g. Alzheimer's, Partinson's disease, Huntington's costeoarthritis; central and peripheral nervous system diseases and neuropathies, e.g. Alzheimer's, Partinson's disease, Huntington's costeoarthritis; catend infarction or stroke; inflammatory sepsies or conjuncy, endotoxin lethality, arthritis, inflammatory bowel disease or companies. The disease or conjuncies or tumours or cancers, pemphigus vulgaris or pemphigus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              56 HVELLFLRYISDWDLDPGRCYRVTWFTSWSPCYDCARHVADFLRGNPNLSLRIFTARLYF 115

The expression of RNA-associated proteins is closely associated with reproductive tissues, nervous tissues, cell proliferation including cancer, inflammation and immune responses, and so they may be used for diagnosis, treatment or prevention of cell proliferative, immune/inflammatory disorders, and reproductive disorders. Diseases and disorders which may be treated include actinic keratosis, atherosclerosis, arteriosclerosis, bursitis, cirrhosis, hepatitis, atherosclerosis, arteriosclerosis, myelofibrosis, paroxysomal nocturnal hemoglobinuria, polycythermia vera, psoriasis, primary thrombocythemia and cancers, and trauma.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ΩX
                                              The human RNA editing enzyme (REE) is used in a pharmaceutical carrier for the treatment of cancer, viral diseases and circulatory system tisocders. The enzyme is used in vivo for the correct processing of RNA transcripts of genes e.g. change of a codon in apolloporotein B (apoB) RNA to give a 100 and 48 kDa product transcribed from the same failure of apo B editing leads to excessive apoB 100 production and Finalure of apo B editing leads to excessive apoB 100 production and hypercholestrolaemia. Other disorders thought to be linked to incorrect RNA processing include aberrant alpha-galactosidase processing in recombinantly to treat related disorders. It can also be used to raise antibodies for immuno-based detection of REE expression levels
                                                                                                                                                                                                                                                                                                                                                    65 ISDWDLDPGRCYRVTWFTSWSPCYDCARHVADFLRGNPNLSLRIFTARLYFCEDRKAEPE 124

This sequence represents the human RNA editing enzyme REE-2. CDNA encoding REE-2 was initially isolated in a prostate tumour cDNA library, with the cDNA encoding the present sequence representing a consensus. REE-2 has chemical and structural homology with the human apob mRNA cditing protein HEPR (28% identity), the rat HEPR homologue REPR (30% identity), and a portion of the mRNA editing enzyme phorbolin I (43% identity). REE-2 was found to be expressed in a variety of CDNA libraries, a high proportion of which were derived from tumours, neuronal CR EEE-2 is therefore thought to be associated with the development of cancer, autoimmune disorders, circulatory system disorders (e.g. cancer, autoimmune disorders, circulatory system disorders (e.g. chypercholesterolaemia), viral infections and neurological diseases (e.g. chypercholesterolaemia), wiral infections and neurological diseases (c.g. diagnosis, treatment and prevention of such diseases via the modulation of transcript editing, which in turn has effects on the encoded protein crelates to methods of detecting nucleic acids man REE-2 in a

                                                                                                                                                                                                                                                                                                                                         The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM3642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous hocalised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and contraction activity, arthritis and inflammation, leukaemias and contractions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                65 ISDWDLDPGRCYRVTWFTSWSPCYDCARHVADFLRGNPNLSLRIFTARLYFCEDRKAEPE 124

The present invention relates to the isolation of novel human enzyme polypeptides, and the cDNA (AAS40785-AAS41684) and genomic sequences encoding them. The enzyme polypeptides of the invention may comprise the functional classes of oxidoreductases, transferases, hydrolases, lyases, isomerases or ligases. The sequences of the invention are useful in the diagnosis, treatment, prevention and/or prognosis of a wide range of disorders including hyperproliferative disorders (e.g. cancer), immunodeficiency disorders (e.g. AIDS) autoimmune disorders including hyperproliferative disorders (e.g. Alzheimer's disease), metabolic disorders (e.g. phenylketonuria), inflammatory disorders (e.g. athroids), cardiovascular disorders (e.g. infertility) and infectious disorders (e.g. Influenza). The polynucleotides of the invention can also be used in gene therapy. 65 ISDWDLDPGRCYRVTWFTSWSPCYDCARHVADFLRGNPNLSLRIFTARLYFCEDRKAEPE 124 Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences. 11 FLYQFKNVRWAKGRRETYLCYVVK--RRDSATSFSLDFGYLRN----KNGCHVELLFLRY 64 preventing, treating neural, immune system, muscular, reproductive, pulmonary, cardiovascular, renal, proliferative disorders and cancerous Human; nootropic; immunosuppressant; cytostatic; gene therapy; cancer; peripheral nervous system; neuropathy; central nervous system; CNS; Alzheimer's; parkinson's disease; Huntington's diseases, hamnostatic; amyotrophic lateral sclerosls; Shy-Drager Syndrome; chemotactic; chemotactic; thrombolytic; drug screening; arthritis; inflammation; 125 GLRRLHRAGVQIAIMTFKDYFYCWNTFVENHERTFKAWEGLHENSVRLSRQLRRIL 180 9; Gaps polypeptides and polynucleotides useful for diagnosing, 34.0%; Score 369.5; DB 22; Length 210; 44.9%; Pred. proteins, called prostate cancer antigens, given in AAB56363 to AAB57302. The prostate cancer antigens can have neuroprotective, cytostatic, cardioactive, immunomodulatory, muscular, vulnerary, gastrointestinal, nephrotropic, antiinfective, gynaecological and antibacterial activities, and can be used in gene therapy. The prostate cancer antigen polynucleotides may be used for detection of prostate cancer, chromosome identification, as chromosome markers, and for numerous other diagnostic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            65 ISDWDLDPGRCYRVTWFTSWSPCYDCARHVADFLRGNPNLSLRIFTARLYFCEDRKAEPE 124
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 or research purposes. The prostate cancer antigens may be used to treat disorders such as neural, immune, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, renal, and proliferative disorders, wounds, and infectious diseases. AAF16506 to AAF16514 to AAB57303 represent sequences used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; oxidoreductase enzyme; transferase; hydrolase; lyase; isomerase; ligase; hyperproliferative disorder; immunodeficiency disorder; autoimmune disorder; neurological disorder; metabolic disorder;

                                                                                                                                                                                                                                                                                                              The present invention relates to the isolation of novel human enzyme polypeptides, and the CDNA (AAS40785-AAS41684) and genomic sequences encoding them. The enzyme polypeptides of the invention may comprise the functional classes of oxidoreductases, transferases, hydrolases, lyases, isomerases or ligases. The sequences of the invention are useful in the diagnosis, treatment, prevention and/or prognosis of a wide range of alsorders including hyperproliferative disorders (e.g. cancer), immunodeficiency disorders (e.g. AIDS) autoimmune disorders (e.g. arthritis), neurological disorders (e.g. Alzheimer's disease), metabolic disorders (e.g. phenylketonuria), inflammatory disorders (e.g. asthma), cardiovascular disorders (e.g. atherosclerosis), blood related disorders (e.g. haemophilia), reproductive disorders (e.g. infertility) and infectious disorders (e.g. Influenza). The polynucleotides of the invention can also be used in gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             FYFOFKNLWEANDRNETWLCFTVEGIKRRSVVSWKT--GVFRNOVDSETHCHAERCFLSW 106

The invention relates to human RNA metabolism proteins (RMEP) and their corresponding cDNA molecules. RMEP and its DNA are used for diagnosing, treating and preventing nervous system disorders (epilepsy, dementla, stroke, Alzheimer's disease, Huntington's disease, Parkinson's disease); prion diseases; fatal familial insomnia, nutritional and metabolic diseases of the nervous system; inherited, metabolic, endocrine and coxic myopathy; mental disorders; dutoimmune/inflammatory disorders)

amnesia and Tourette's disorder; autoimmune/inflammatory disorders (AIDS-aquired immune deficiency syndrome, allergies, anaemia, asthma, gout, atherosclerosis, Crohn's disease, diabetes mellitus, glomerulonephritis, atheritis, osteoporosis, pancreatitis, systemic lupus sythematosus, clicerative colitis, and infections); cell proliferative disorders (cancer arteriosclerosis, cirrhosis, hepatitis, psoriasis); and developmental disorders (renal tubular acidosis). RMEP DNA is useful in drug screening techniques, gene therapy and for creating transgenic animals. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  7

```

```
The present invention relates to the isolation of novel human enzyme polypeptides, and the CDNA (AAS40785-AAS41684) and genomic sequences encoding them. The enzyme polypeptides of the invention may comprise the functional classes of oxidoreductases, transferases, hydrolases, lyases, isomerases or ligases. The sequences of the invention are useful in the disorders including hyperproliferative disorders (e.g. cancer), immunodeficiency disorders (e.g. AIDS) autoimmune disorders (e.g. arthritis), neurological disorders (e.g. Alzheimer's disease), metabolic disorders (e.g. phenylketonuria), inflammatory disorders (e.g. asthma), cardiovascular disorders (e.g. atherosclerosis), blood related disorders (e.g. haemophilia), reproductive disorders (e.g. infertility) and infectious disorders (e.g. Influenza). The polynucleotides of the invention can also be used in gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ISDWDLDPGRCYRVTWFTSWSPCYDCARHVADFLRGNPNLSLRIFTARLYFCEDRKAEPE 124
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

C;Comment: This protein belongs to the cytidine deaminase gene family.
C;Superfamily: apolipoprotein B mRNA editing enzyme, catalytic chain 1
C;Keywords: hydrolase; zinc finger
F;48-96/Region: zinc finger HHCC motif

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
